Download the SlowCOVIDNC Exposure Notification app to help slow the spread of COVID-19.

The image shows a mockup of the SlowCOVIDNC app interface. The central screen displays the 'Welcome to SlowCOVIDNC' message, identifying it as the official Exposure Notification App of the North Carolina Department of Health and Human Services (NCDHHS). It instructs users to enable Exposure Notifications and Bluetooth on their device. Below this are buttons for 'HOW IT WORKS' and 'ENABLE', along with links to a 'Privacy Checklist' and 'Privacy Policy'. To the left, a side panel titled 'Anonymous Tokens' explains the app's operation. To the right, another side panel shows a notification about random letters and tokens. At the bottom right, there are two QR codes for downloading the app from the 'Google Play' and 'App Store'.
